Supersedes: AFI21- Pages: 7

103\_ACCSUP\_ADD\_BB, 14

December 2009

This MESL compliments AFI 21-103, *Equipment Inventory, Status, and Utilization Reporting*. This Addendum applies to all F-22A ACC, Air National Guard (ANG) and Air Force Reserve Command (AFRC) units and members. Ensure that all records created as a result of processes prescribed in this publication are maintained in accordance with (IAW) Air Force Manual (AFMAN) 33-363, *Management of Records*. Contact supporting records managers as required. Refer recommended changes and questions about this publication to the Office of Primary Responsibility (OPR) using Air Force Form 847, *Recommendation for Change of Publication*, to HQ ACC/A4V22, 204 Dodd Blvd., Suite 112, Langley AFB VA 23665-2791, and send information copies to the applicable Office of Collateral Responsibility (OCR). This publication may not be supplemented or further implemented/extended.

### SUMMARY OF CHANGES

This document has been substantially revised and must be completely reviewed. Major changes include: Note 11 is revised to allow PMC for TF coded aircraft and is now note 8. Note 16 is now note \* applicable to all columns and all lines and was revised to further standardize the debrief process and aircraft status reporting.

- 1. General. The MESL is the basis of status reporting IAW AFI 21-103. MESLs lay the ground work for reporting the status of aircraft availability. They list the minimum essential systems and subsystems that must work on an aircraft for it to perform specifically assigned unit wartime, training, test or other missions. Mission Ready Available (MRA) is used in readiness Status of Resources and Training System (SORTS) reporting only and denotes Mission Capable (MC) aircraft capable of being configured for a contingency mission IAW COMACC OMNIBUS Plan.
  - 1.1. Qualifying notes are used to define aircraft exceptions and help explain complex degraded mission systems such as suspension equipment.
  - 1.2. Aircraft status for generation and deployment. The goal is to generate or deploy Fully Mission Capable (FMC) aircraft, recognizing status actually achieved may be less than FMC. A Not Mission Capable (NMC) aircraft may be deployed provided it is safe for flight and can be configured and generated to MRA status at an employment site.
  - 1.3. All ACC units will generate, or deploy and regenerate, using ACC MESLs. Major Command (MAJCOM) differences in MESLs are acknowledged. Upon actual deployment to another MAJCOM theater, the gaining MAJCOM has the responsibility to resource and specify the unit's requirements and resource the differences in support/mission equipment.
  - 1.4. Reading the MESL. A MESL is read by comparing the systems stated by Logistics Control Number (LCN) against the FSL and all applicable BSLs across the page. Each unit's Design Operational Capability (DOC) statement determines applicability of BSL columns. The aircraft MESLs incorporate all ACC assigned aircraft; therefore, it is important to compare only those columns listed in the MESL which are applicable to the unit's assigned aircraft. For example, units with CC (wartime) coded aircraft would determine and report status using only the FSL and BSL columns related to their DOC statement. Units with TF (training) coded aircraft would determine and report status using only the FSL and TNG columns, and units with CB (evaluation) coded aircraft would determine and report status using only the FSL and TST columns. Units with multiple coded aircraft will ensure status is reported using the MESL columns appropriate to the individual aircraft assignment code.

TNG: ONLY APPLIES TO ACFT IN ASSIGNMENT CODE TF (TRAINING)

TST: ONLY APPLIES TO ACFT IN ASSIGNMENT CODE CB (EVALUATION)

## **QUALIFYING NOTES:**

1. Both radios and backup must have full functionality (UHF, VHF, secure, Have Quick) for FMC. Both radios must have partial capability; one (1) UHF and one (1) VHF or one (1) radio must be fully functional for PMC.

- 2. Exterior lighting required per AFI 11-202V3, *General Flight Rules*. Landing light and all strobe lights required for PMC.
- 3. Two (2) of three (3) operational SMFDs and PMFD, HUD, RUFD required for PMC.
- 4. For Air to Air configuration any combination of six (6) of the eight (8) internal weapons stations to include a minimum of one (1) Aim 9M station required for PMC.
- 5. Inoperative weapons station 2 and or 11 is considered PMC.
- 6. For Air-to Ground configuration only six (6) internal weapons stations are available and All (6) of these stations are required for FMC. One (1) AIM-9M station may be inoperative for PMC.
- 7. Five (5) of six (6) MLD sensors required for PMC.
- 8. During peacetime operations, LO system reporting codes for combat coded (CC) aircraft are FMC or NMC-Airworthy. The F-22 LO system is FMC when the Signature Assessment System (SAS) margins-used are < 100% and F119 LO coatings are within Engine SAS (ESAS) limits. The LO system status on CC aircraft is NMC-Airworthy when the SAS margin is > 100% or engine coating loss exceeds ESAS limits, as long as un-repaired LO damages do not affect structural integrity and/or Safety of Flight. PMC for the LO system on CC aircraft is only authorized during combat/contingency/alert operations (to include theater security packages/cooperation missions). PMC for the LO system on training coded aircraft is authorized provided un-repaired LO anomalies do not affect applicable ACC/A3 training syllabi, structural integrity, and/or safety of flight.
- 9. Loss of one IFDL MBA is PMC.
- 10. Inoperative gun system is PMC.
- 11. DMVR malfunctions that only affect recording of displays are PMC.
- \* For FRCs that assert a system "Degrade" in conjunction with pilot observed performance degradation, the aircraft status will be reported as PMC. For FRCs which asserts a system "FAIL" in conjunction with pilot observed performance degradation, the aircraft will be reported as NMC.

GILMARY M. HOSTAGE III, General, USAF Commander
